Contents

1	Likelihood with partial observations	7
1.1	Likelihood	7
1.1.1	The context	7
1.1.2	Likelihood for main sample	7
1.1.3	Likelihood for MAX data	8
1.1.4	Likelihood for OTS data	9
1.1.5	Global log-likelihood	9
1.2	Log-likelihood derivatives	10
1.2.1	Goals	10
1.2.2	Main sample	10
1.2.3	MAX data	10
1.2.4	OTS data	11
1.2.5	Computation	11
2	Classical maximum likelihood	13
2.1	Scope	13
2.2	Classical Weibull	13
2.2.1	The distribution	13
2.2.2	The likelihood	14
2.2.3	Estimation algorithm	14
2.2.4	Information matrix and inference	15
2.3	Classical gamma	16
2.3.1	The likelihood	16
2.3.2	Information matrix and inference	17
2.3.3	Concentration of the likelihood	17
2.4	Lomax	18
2.4.1	The distribution	18
2.4.2	The likelihood	18
2.4.3	Concentrated log-likelihood	18
2.4.4	Fisher information and inference	19
2.4.5	Bounds for $\hat{\beta}$	20
2.4.6	CV close to 1	20
2.4.7	Example	21
2.5	Maxlo	22
2.5.1	The distribution	22

2.5.2	The likelihood	22
2.5.3	Concentrated log-likelihood	23
2.5.4	Information matrix and inference	24
2.5.5	Bounds for $\hat{\beta}$	25
2.5.6	CV close to 1	26
2.5.7	Example	26
2.6	Generalised Pareto Distribution (GPD)	26
2.6.1	Information matrix and inference	28
2.7	Shifted Weibull	29
2.7.1	The likelihood	29
2.8	Negative binomial Lévy process	30
2.8.1	Estimation	30
2.8.2	Log-concavity	31
3	GPD-POT and GEV block maxima	32
3.1	GPD-POT to GEV-max	32
3.1.1	Temporal aggregation of the marked process	32
3.1.2	Links with Extreme Value regression	35
3.2	GEV-max to GPD-POT	35
3.2.1	Disaggregation for constant block duration	35
3.3	Renext functions	40
3.4	Initial values for exponential marks/excesses	43
3.4.1	Problem	43
3.4.2	Block maxima	43
3.4.3	r largest	44
3.4.4	OTS	45
4	Plotting positions	46
4.1	Goals	46
4.1.1	Types of plots	46
4.2	Plotting positions for ordinary sample	47
4.2.1	Outlook	47
4.2.2	No censoring	47
4.2.3	Type I censoring	49
4.2.4	Worked example	51
4.3	Plotting positions for POT	53
4.3.1	Outlook	53
4.3.2	No censoring	53
4.3.3	Type I censoring	54
4.3.4	Type II censoring	57
5	Tests	59
5.1	GPD tests in POT	59
5.1.1	Tests of interest	59
5.1.2	Likelihood-ratio	59
5.2	Lomax alternative: ordinary sample	60

5.2.1	Jackson's test	60
5.2.2	CV2 (or Wilk's) exponentiality test	61
5.2.3	Likelihood-ratio	62
5.3	Workable approximation	62
5.3.1	Context	62
5.3.2	The approximation formulas	63
5.3.3	Getting the coefficients	64
5.4	Test for GEV and Block Maxima	65
5.5	Heterogeneous data	66
5.5.1	Problem	66
5.5.2	Stratified sampling \star	66
A	Miscellaneous	71
A.1	Relation between Extreme Value distributions	71
A.1.1	GPD and GEV	71
A.1.2	Transformations	71
A.2	Derivatives of functions related to some distributions	73
A.2.1	Exponential	73
A.2.2	Weibull	73
A.2.3	GPD (two-parameter)	74
A.2.4	Lomax	75
A.2.5	maxlo	75
A.2.6	Mixture of exponentials	76
A.3	Jacobian of the "POT to GEV" transform	77
A.3.1	General case $\xi \neq 0$	77
A.3.2	Gumbel-Exponential case $\xi = 0$	77
A.4	The "GEV to POT" transform and its Jacobian	77
A.4.1	Location μ known	77
A.4.2	Rate λ known	78
A.5	Bounds for $\hat{\beta}$ in the Lomax case	79
A.5.1	Goal	79
A.5.2	Upper bound	80
A.5.3	Lower bound	81
A.6	Bounds for $\hat{\beta}$ in the Maxlo case	82
A.6.1	Goal	82
A.6.2	Upper bound	82
A.6.3	Lower bound	83
A.7	Spacings of the exponential distribution	84
A.8	Proof of theorem 3.3	85
